**RE: New-Indy Catawba Mill, LLC
 Hydrogen Sulfide Monitoring Program
 Monthly Data Package Submittal, June 27, 2021 – July 31, 2021**

Dear Mr. Cleveland:

TRC Environmental Corporation (TRC) is pleased to submit this monthly data package submittal to New-Indy Catawba Mill, LLC (New-Indy). This submittal includes data collected from New-Indy's Catawba Mill facility for the period June 27 – July 31, 2021. Data was collected and this report has been prepared in accordance with the "New-Indy Catawba Mill Hydrogen Sulfide and Meteorological Onsite Monitoring Program, Quality Assurance Project Plan" (QAPP) dated June 1, 2021, and conditionally approved by the United States Environmental Agency (EPA) and the South Carolina Department of Health and Environmental Control (DHEC).

Summary of Results

Included in this report, as Attachment A-1, is a single summary plot presenting hydrogen sulfide (H_2S) concentrations at all onsite monitoring locations as average concentrations over a 30-minute period. Meteorological data collected onsite are presented as wind rose plots, in Attachment A-2. A wind rose plot is a graphic representation of the distributed winds. The spokes in the wind rose plot show the greatest frequency of the wind direction (coming from) and the colored bands show the range of wind speed. Additionally, values below the lowest wind speed range are reported as calm conditions and listed as a percentage of the total winds. Concentrations of H_2S are summarized as concentration rose diagrams and can be found in Attachment A-3. Concentration roses are created using the wind direction data coupled with H_2S concentration data. The spokes in the concentration rose plot show the greatest frequency of the wind direction (coming from) and the colored bands show the range of H_2S concentrations. Daily and seven-day rolling average H_2S concentrations are tabulated and included in this report as Attachment A-4. Seven-day rolling average concentrations are compared to the EPA Acute Exposure Limit for H_2S 70 parts per billion (ppb). Data completeness for this reporting period is summarized in Attachment A-5 of this report. The criteria for meeting the data quality objectives for completeness, based on quarterly datasets, are 80% for hydrogen sulfide and 90% for meteorological parameters.

Data Quality

Daily quality control checks are programmed to automatically initiate at all onsite monitoring locations.

Results from each daily check are presented in Attachment B-1. The data from these checks are used to calculate precision and bias. The QAPP establishes measurement quality objectives (MQOs) for H₂S regarding precision and bias expressed as a coefficient of variation (CV) <10% and ± 10%, respectively. Precision and bias are calculated in accordance with 40 CFR Part 58 Appendix A, Section 4.1. Precision and bias calculations are presented in Attachment B-2. Data completeness goals are established for quarterly assessment and defined in the QAPP as 80% of hourly values per monitoring quarter. Missing and/or invalid periods with the corresponding AQS qualifier flags are summarized in Attachment B-3. The analyzers at all monitoring stations were calibrated at the time of installation and recalibrated if needed. On June 28, 2021 a multipoint calibration verification was performed on the Station 1 H₂S analyzer. On July 27 and 28, 2021, during the quarterly visit, multipoint calibration verifications were performed at all three monitoring locations. Results from the most recent calibrations are included as Attachment B-4 to this report. Certifications of the gas cylinders used to generate standard calibration gas samples are presented in Attachment B-5.

Monthly Summary Activities

Routine maintenance was performed on July 27 and 28, 2021 on all three stations as part of the project's preventative maintenance activities. There were no exceedances of the 30-minute EPA Acute Exposure Guidance Limit of 600 ppb during the period of June 27 to July 31, 2021.

Included in this submittal are the following items:

- Attachment A: Summary Presentation
 - A-1: Summary Plot – All Stations
 - A-2: Monthly Wind Rose Diagrams
 - A-3: Monthly Concentration Rose Diagrams
 - A-4: Daily and Seven-Day Rolling Average Summary Table
 - A-5: Monthly Data Completeness
- Attachment B: QA/QC Documentation
 - B-1: Results of Daily Automated QC Checks
 - B-2: Precision and Bias Calculations
 - B-3: Missing/Invalid Flagged Data Periods
 - B-4: T100/101 and T700 Calibrations
 - B-5: Calibration Cylinder Assay
- Attachment C: 30-Minute Average Data

New-Indy Catawba Mill, LLC – Catawba, SC
Onsite H₂S and Meteorological Monitoring Program
Monthly Data Package Submittal, June 27 – July 31, 2021
September 3, 2021

TRC has completed a Level 2 validation of the data contained in this report in accordance with §4.2 of the QAPP. Should you have any questions about the data package submittal, presented in the attachments, please let me know.

Respectfully submitted,

Dayna Pelc
TRC Project Manager

CERTIFICATE OF ANALYSIS

Grade of Product: EPA Protocol

Part Number: E02NI98E15A0411
Cylinder Number: CC423517
Laboratory: 124 - Durham (SAP) - NC
PGV/P Number: B22021
Gas Code: H2S,BALN

Reference Number: 122-402063965-1
Cylinder Volume: 144.3 CF
Cylinder Pressure: 2015 PSIG
Valve Outlet: 330
Certification Date: Mar 29, 2021

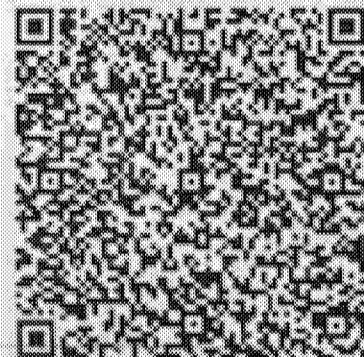

Expiration Date: Mar 29, 2024

Certification performed in accordance with "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards (May 2012)" document EPA 800-R-12-031, using the assay procedures listed. Analytical Methodology does not require correction for analytical interference. This cylinder has a total analytical uncertainty as stated below with a confidence level of 95%. There are no significant impurities which affect the use of this calibration mixture. All concentrations are on a mole/mole basis unless otherwise noted.

Do Not Use This Cylinder below 100 psig i.e. 0.7 megapascals.
